EECE 2140: Computing Fundamentals for Engineers

Spring 2026

Lab Assignment #01 Set up GitHub repo and VSCode/Makefile build environment on Linux

Topic: GitHub + Overleaf **MAC USER**

Student Name	Matthew Rondon
NUID	002508996
Email	Rondon.m@northeastern.edu
Instructor	Dr. Fatema Nafa
Due Date	January 11 2026

Submission Checklist (must match syllabus requirements)

- Submit **one PDF** generated from this Overleaf report.
- Include **clear screenshots** for each task (text must be readable).
- Include your **GitHub profile link** and **Overleaf project link** in the report.

- File name: `Assignment01_Rondon.pdf`

How to complete this assignment

1. Complete each task below in order.
2. For each task, include the required evidence (screenshots, links, and short notes).
3. When you paste a link, ensure it opens correctly (no private/local-only links unless instructed).

Section A: WSL2 Installation Verification

Task 1.
Verify that WSL2 is installed and Ubuntu runs

Checklist Item

Goal: Confirm that WSL is installed, WSL2 is enabled, and your Linux distro launches.
What to do (Windows PowerShell):

- Open **PowerShell** and run:

Listing 1: WSL checks (PowerShell)

```
wsl --status
wsl -l -v
```

Required evidence:

- Screenshot showing output of `wsl -status`
- Screenshot showing output of `wsl -l -v` (Version should be `2`)
- Screenshot showing Ubuntu terminal open (your username visible)

Notes (1–3 sentences):
Write what you observe (e.g., distro name, default version, any issues).

Task 2.
Install build tools inside Ubuntu and verify versions

Checklist Item

Goal: Install the compiler and tools we will use all semester.
What to do (Ubuntu terminal): Run the commands below.

Listing 2: Install tools (Ubuntu)

```
sudo apt update
sudo apt install -y build-essential cmake git
```

```
g++ --version
cmake --version
git --version
```

Required evidence:

- Screenshot showing successful install command(s)
- Screenshot showing `g++`, `cmake`, and `git` version outputs

Notes (1–3 sentences):

Section B: Visual Studio Code + WSL Integration

Task 3.

Install VS Code and connect it to WSL

Checklist Item

Goal: Use VS Code as your editor while compiling in WSL.
What to do:

- Install VS Code on Windows.
- In VS Code, install the **WSL extension** (Microsoft).
- From Ubuntu terminal, open a folder in VS Code using `code .`

Listing 3: Open VS Code from Ubuntu (WSL)

```
cd ~
mkdir -p eece2140
cd eece2140
code .
```

Required evidence:

- Screenshot of VS Code showing bottom-left text `WSL: Ubuntu` (or similar)
- Screenshot of VS Code integrated terminal showing a Linux prompt (e.g., `username@...: /eece2140$`)

Notes (1–3 sentences):

Task 4.

Create and run a C++ "Hello World" from VS Code in WSL

Checklist Item

Goal: Confirm you can compile and run a C++ program using Linux tools.
What to do:

- Create `main.cpp` in the `eece2140` folder.
- Compile and run using the terminal commands below.

Listing 4: Compile and run (WSL terminal inside VS Code)

```
g++ -std=c++17 -Wall -Wextra main.cpp -o main
./main
```

Required evidence:

- Screenshot of `main.cpp` open in VS Code
- Screenshot of terminal output showing successful run (your program output)

Paste your C++ code here:

Listing 5: main.cpp

```
#include <iostream>

int main() {
    std::cout << "Hello from EECE 2140 on WSL2!\n";
    return 0;
}
```

Notes (1–3 sentences):

Section C: GitHub Account and First Repository

Task 5.

Create a GitHub account and set up your profile

Checklist Item

Goal: Create a GitHub account and confirm your profile is accessible.
What to do:

- Create (or confirm) your GitHub account.
- Add a profile picture and your name.

Required evidence:

- Screenshot of your GitHub profile page
- Paste your GitHub profile link below

GitHub Profile Link:
https://github.com/rondonmatthew

Task 6.

Create a repository and push your Hello World project

Checklist Item

Goal: Create a repo and push code from WSL using git.
What to do (WSL terminal): Use the command sequence below (edit placeholders).

Listing 6: Initialize git repo and push (edit placeholders)

```
cd ~/eece2140
git init
git add main.cpp
git commit -m "Add Hello World"

# Replace with your repo URL from GitHub (HTTPS or SSH)
git branch -M main
git remote add origin https://github.com/rondonmatthew/EECE2140.git
git push -u origin main
```

Required evidence:

- Screenshot of terminal showing successful `git push`
- Screenshot of your GitHub repo showing `main.cpp` uploaded

GitHub Repository Link:
https://github.com/rondonmatthew/EECE2140.git
Notes (1–3 sentences):

Section D: Overleaf Setup and Report Submission

Task 7.
Create an Overleaf account and compile this report

Checklist Item

Goal: Confirm you can use Overleaf and compile a PDF.
What to do:

- Create (or confirm) an Overleaf account.
- Upload this `.tex` file to a new Overleaf project.
- Click **Recompile** and download the PDF.

Required evidence:

- Screenshot of your Overleaf project (left file tree visible)
- Screenshot of successfully compiled PDF preview

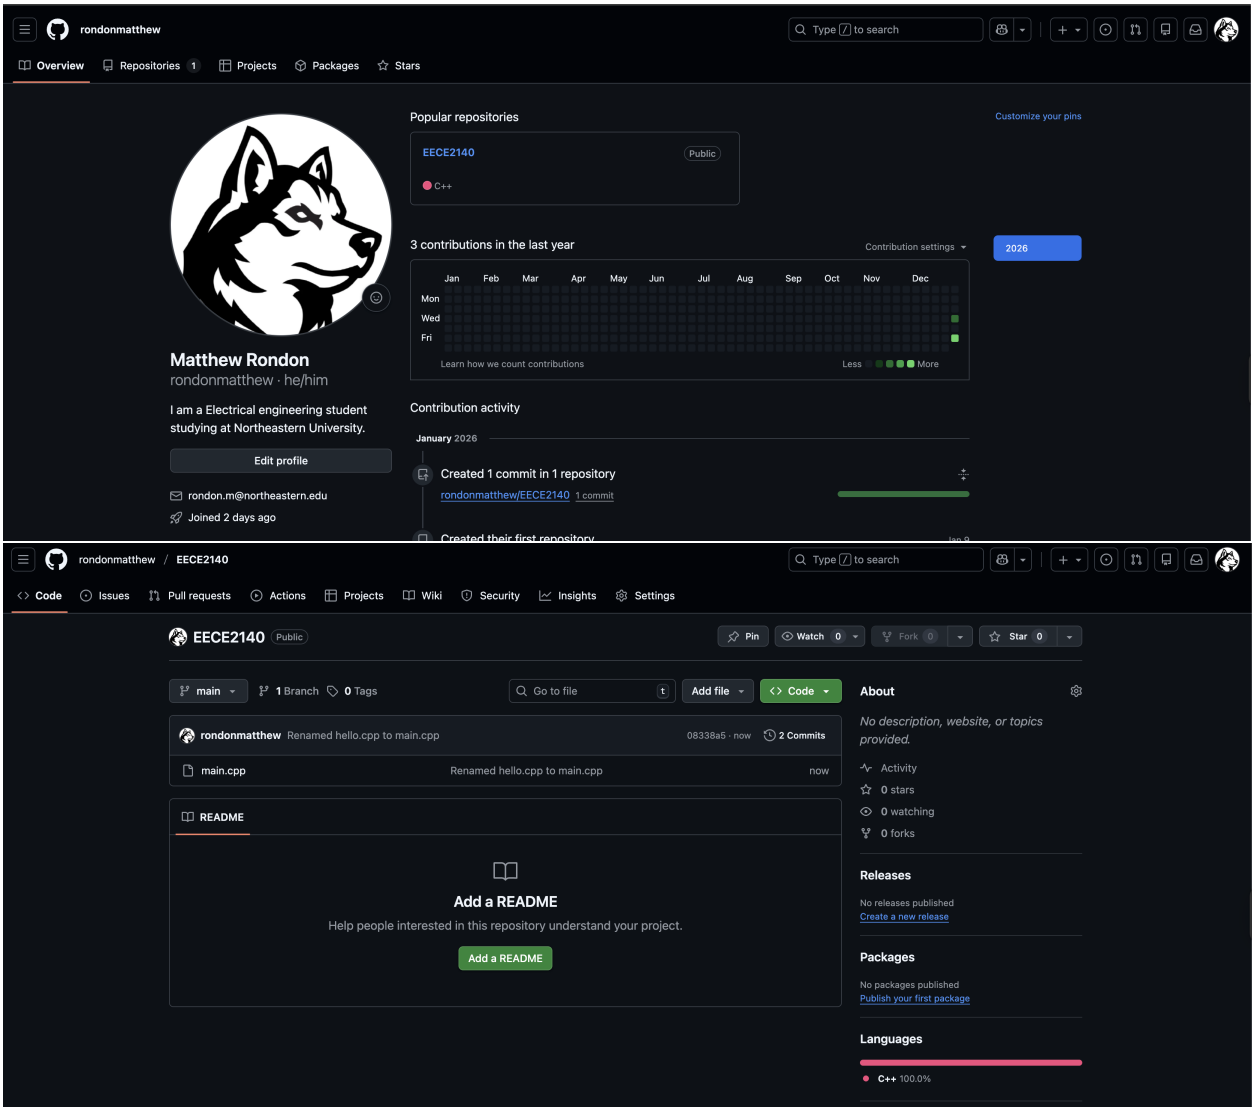
Overleaf Project Link (if shareable):
https://www.overleaf.com/read/ztnhgpzrsysr#e67849
Notes (1–3 sentences):

Appendix: Screenshots

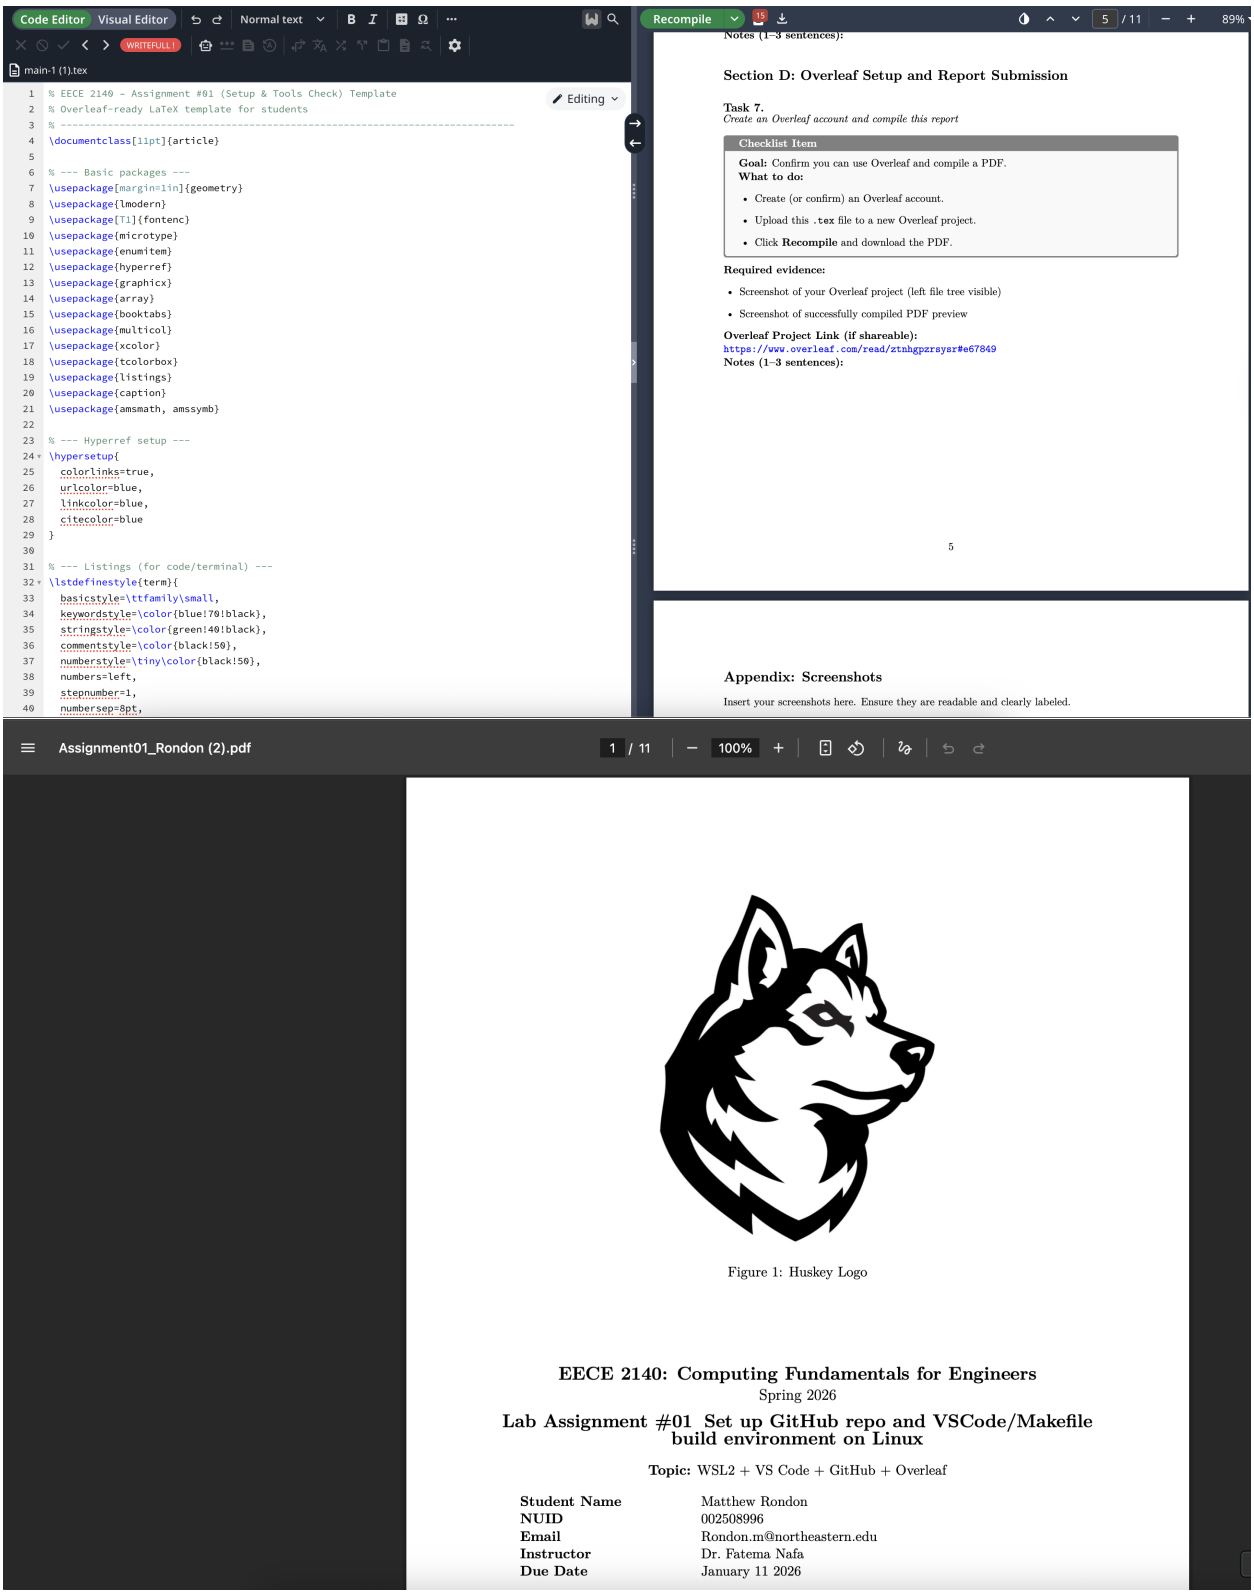
Insert your screenshots here. Ensure they are readable and clearly labeled.

Screenshots A-B are not included because I am a Mac User.

C1: GitHub profile (TOP) and Repo (BOTTOM)



D1: Overleaf project (Top) + compiled PDF (BOTTOM)



Reminder: Your screenshots must be clear, readable, and directly support each checklist item.
